

PUERTO RICO SUPERMARKET GETS TOTAL SOLUTION

Dorta Cash Register Service in Puerto Rico has been selling ECRs and retail solutions for over 15 years and has more than 200 installations during this time.

In August 1999, one of DCRS's grocery customers decided to replace their old system with a complete solution to control inventory and speed customer checkouts. The supermarket, Econo Nuñez, required very reliable hardware and software, plus an excellent service and maintenance company to handle the installation, training and support for their eight-lane scanning store. Fortunately for Econo Nuñez, Dorta Cash Register Service was that company.

DCRS knew the importance of a solid installation and trusted hardware and software. They selected the POSIFLEX PST-6000 terminal and Express Lane Software from DynaTech for the installation. The POSIFLEX/Express Lane combination has proven to be a great team.

DCRS procured the equipment, configured the system, including the network, and did a complete bench test before the system was installed. Following the installation, Abimael Dorta and DCRS assisted Econo Nuñez with the system setup, training and polling.

"This scanning installation allows us to ring up our customers 2 to 3 times faster than our old system and get up to the minute, accurate inventory information so we will never be out of anything", said owner Papo Nuñez.
